SHEDIAC, NB

2001^{the} BEGINNING

I got my first taste of programming while attending Louis-J.-Robichaud High School in Shédiac, New Brunswick. I don't remember the programming language – but I remember being fascinated to make objects move by writing lines of code.

It had not crossed my mind that this would or even could become a career, but a short time later, I would be proved wrong.

2003^{my} EDUCATION

In the summer of 2003, what started as a normal baseball camp, ended with an offer that would change my life. I was invited to go play baseball for Durham College. I immediately researched the school and the programs it offered. I got to the “Web Developer” program and got flashbacks of my programming class in high school.

Two months later I was on a plane heading to Ontario. The program was a great intro to web development. I studied programming, design, audio editing, video editing and so much more. It gave me perspective on the areas I excelled and enjoyed.

OSHAWA, ON

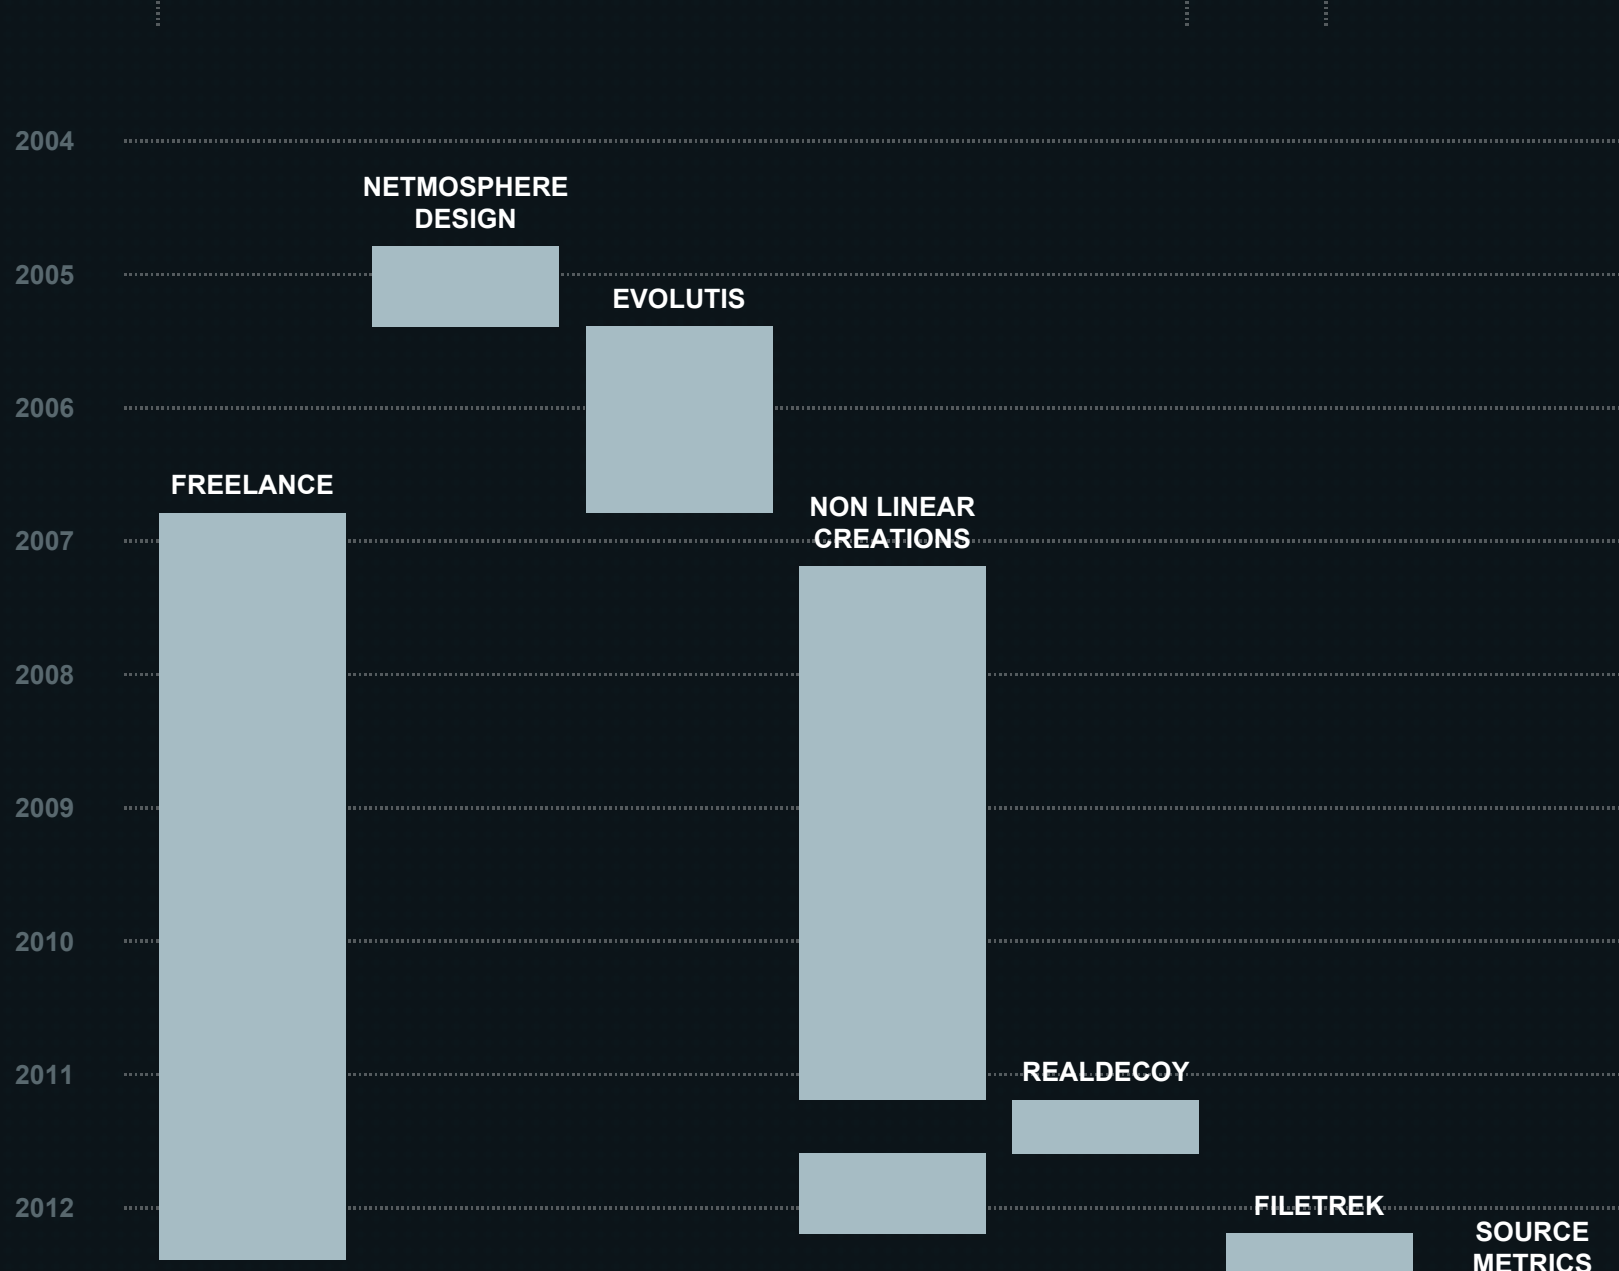

2005^{my JOB} CAREER

During my second year at Durham College, I landed my first job working at Netmosphere Design. I was soon facing challenges and responsibilities school could not teach. I was dealing with short deadlines, clients, and... oh yeah, learning how to build websites.

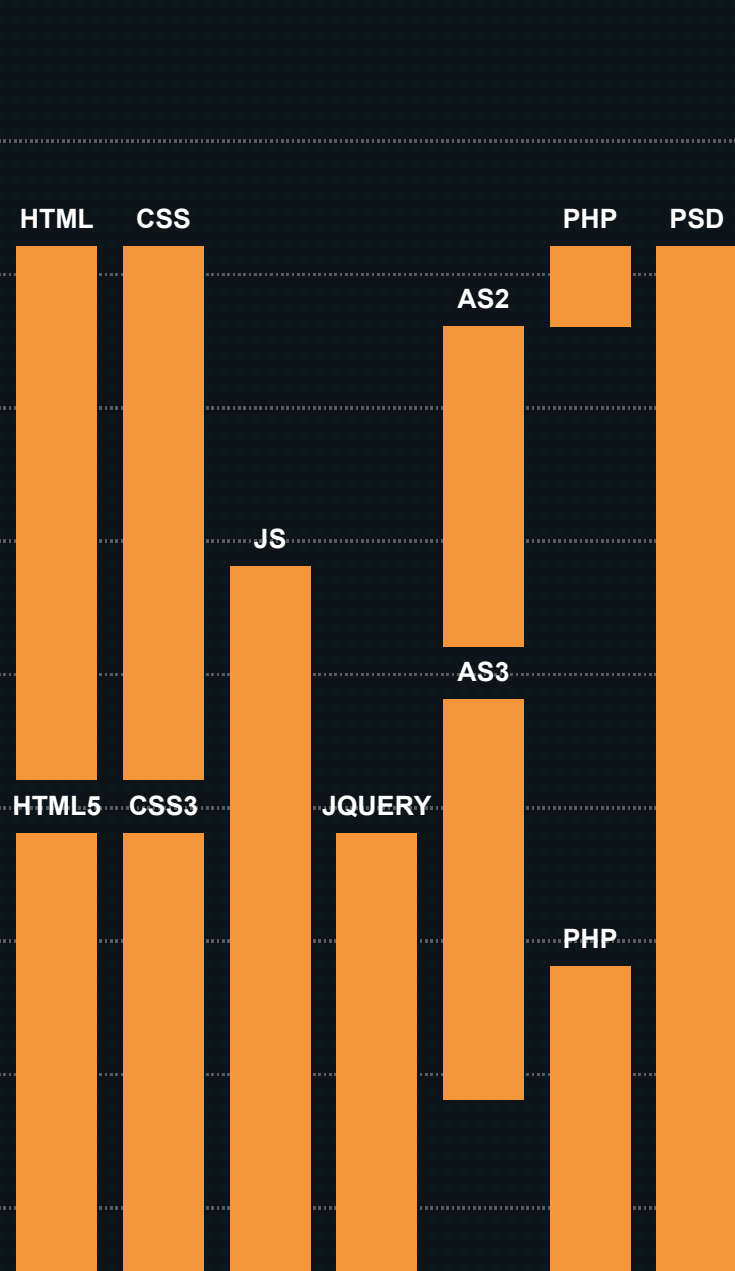

That's when I first realized the importance of on-the-job training. Being in an environment with people who were passionate about what they did rubbed off and made me appreciate the field. I started realizing that I would be doing something different everyday while continuously looking to get better.

my WORK/SKILLS

WORK EXPERIENCE

SKILLS

Other things I'm pretty familiar with:

- AJAX
- HTML5 Boilerplate
- Modernizr
- OOCSS
- CSS Grids
- Progressive Enhancement
- UX / Usability
- Debugging Tools
- Responsive Web Design
- Mobile Web Development
- Cross-Browser Development
- Test Driven Development
- CSS Pre-Processors
- Version Control (Git, SVN, TFS)
- HTML5 APIs
- OOP
- Accessibility
- HTML5 / CSS3 Polyfills

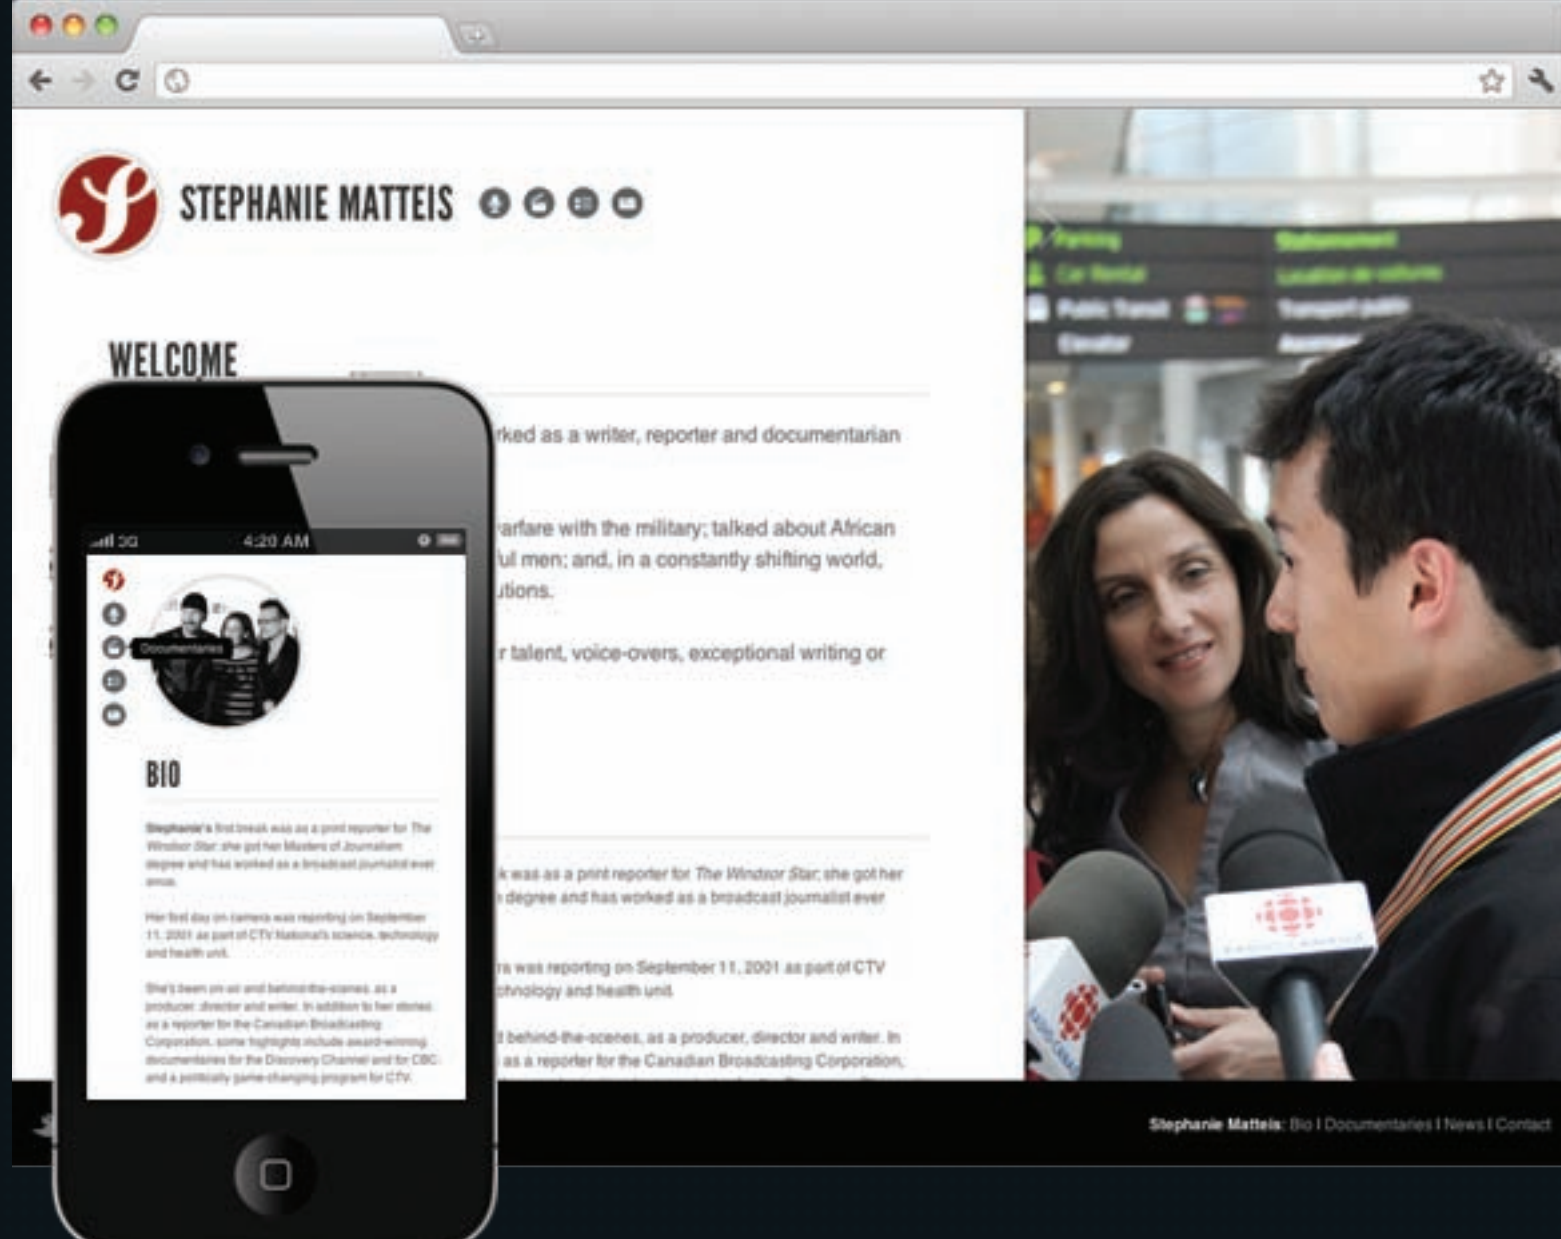

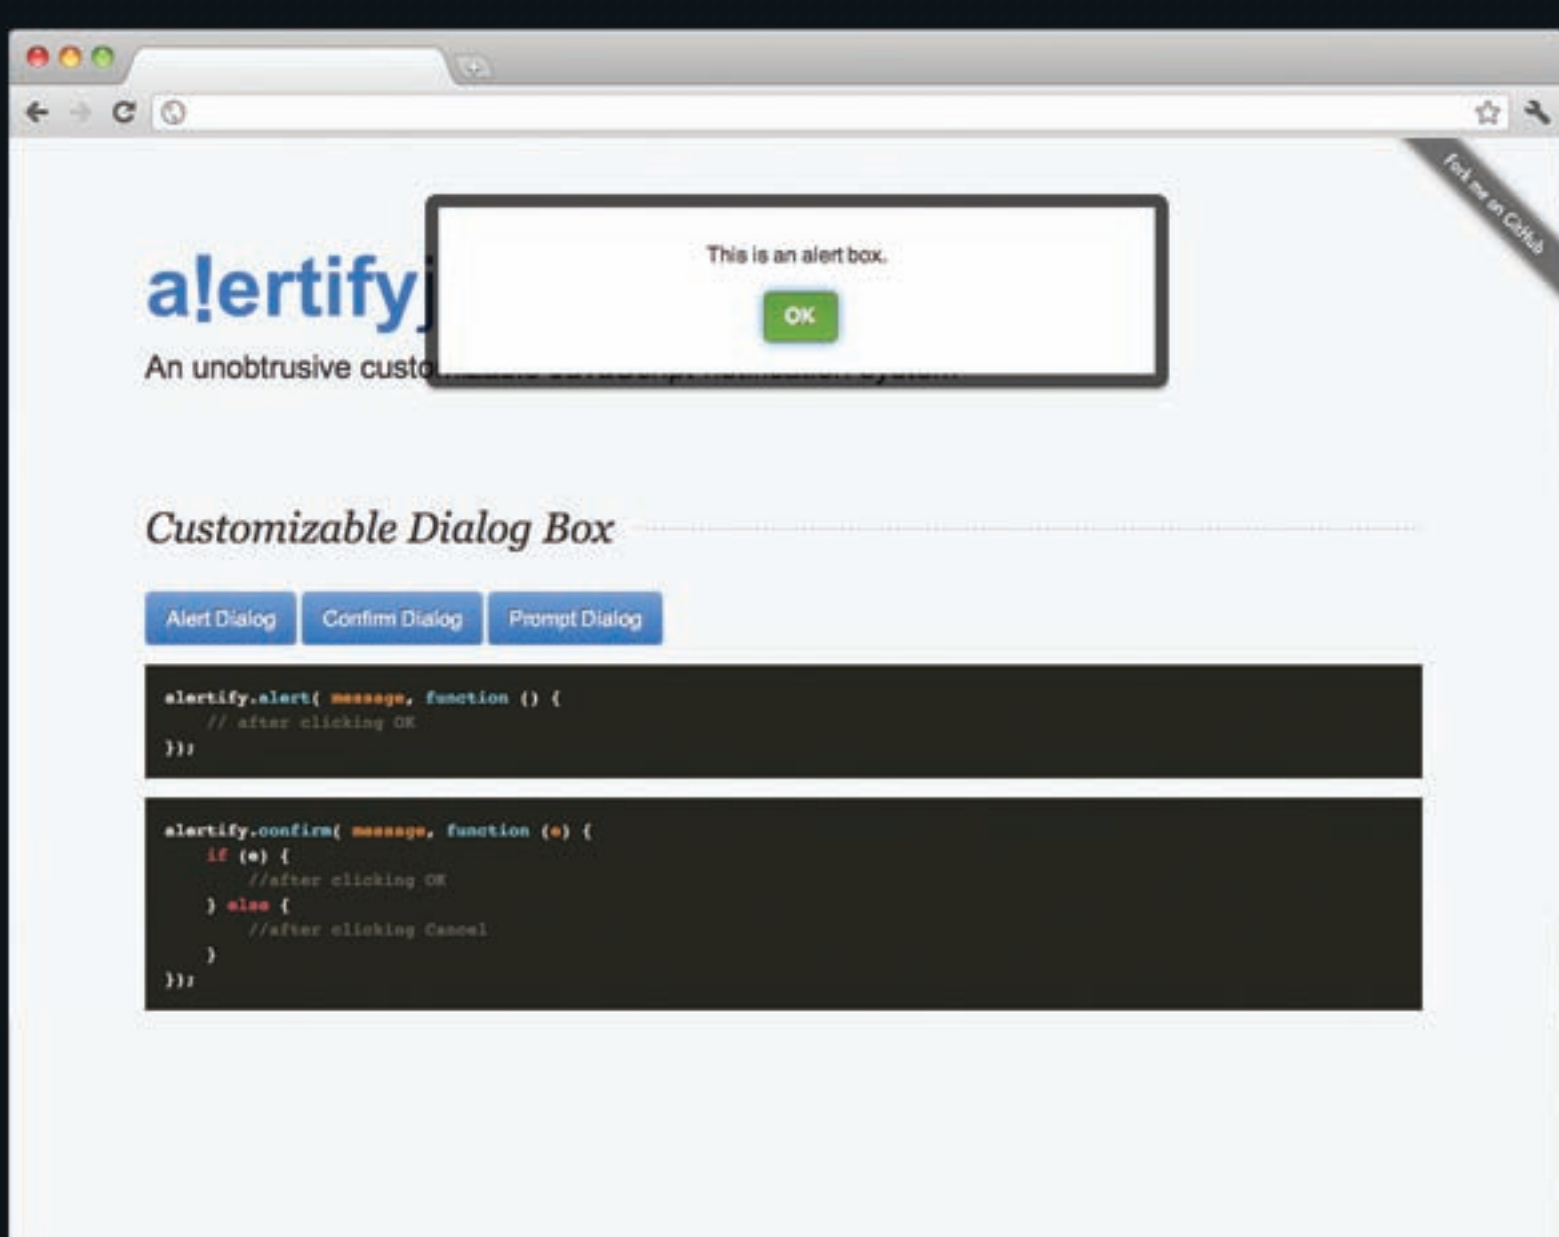

my PORTFOLIO more @ www.fabiend.ca

fabien-d.github.com/alertify.js/

alertify.js is an unobtrusive customizable JavaScript notification system. It aims to replace the native browser dialog boxes.

Features:

- Customizable alert, confirm and prompt
- Customizable unobtrusive notifications
- Callbacks
- Chaining which allows queued dialogs

www.matteis.com

A one-page website for writer, reporter and documentarian Stephanie Matteis.

My involvement:

- HTML
- CSS
- JavaScript
